

Update on the Junior Sportsman Class

Following on from the last update for Junior Sportsman (emailed to clubs 19th February 2009).

The class has been monitored at the last two race meetings since the tyre rule was changed. There needs to be another slight adjustment to the rules.

The weight for the Arc Water Cooled engines will rise 5 Kg to 140Kg as per the Chapter 38 in the rule book.

The weight for Air cooled engines will also rise 5Kg to 132 Kg

The New Weights are

Air Cooled Engines	132Kg
Arc Water Cooled Engines	140Kg
Rotax Junior Max Engines	145Kg

This rule change will take effect from the 5th March.

A reminder that this is a State based class so the rules can be changed if necessary to make the class more competitive, the class will be monitored when it runs next and we will go from there.

Please feel free to contact me with you thoughts on the class
